

Kewaunee Harbor Project Update

Now that spring is here, security fencing has been set up and work to complete the harbor improvements has begun. Much of the progress is underground as tie rods anchoring the new walls to the shore are being installed. Scaffolding on the Lighthouse has been set up. Lighthouse work includes: removal of asbestos roof shingles and siding, installation of a new roof and fiber cement siding and storm windows for exterior protection. Stone has been selected for the step revetment water feature. A variety of other work will take place including the installation of boat cleats, sewer, water, and electric lines plus park landscaping and paving. We expect occasional heavy truck traffic removing debris and delivering materials. Project completion is expected by mid-June.

We hope the entire community has a chance to stop by and enjoy our beautiful harbor facilities this summer.
